

# *Craneless Component Exchange Technology is Here!*

## **NO CRANE REQUIRED!**

Jensen Crane Services (JCS) now offers craneless gear box exchange services for Gamesa, GE, NEG Micon, Siemens and Vestas wind turbines.

## **SAVES TIME & MONEY!**

This new technology eliminates the need for crane pads, widening of roads or travel permits. All of the required equipment for an exchange transports on two legal load trailers, enabling JCS to respond to your gearbox exchange needs in as little as 24 hours even when frost bans are in effect!

## **SMALLER FOOTPRINT!**

The gearbox exchange equipment self assembles without the use of ancillary cranes and requires a very small footprint. This minimizes crop damage where turbines are installed on farmland.

## **HIGHER WIND SPEEDS!**

Conventional truck cranes are limited to 6-10 M/S (meters per second) operating wind speeds. JCS's craneless technology operates in wind speeds up to 18 M/S, almost **DOUBLE** the limits of our competitors! Higher wind speed limitations equals less downtime saving you money!

## **SERVICE YOU CAN COUNT ON!**

Jensen Crane Services is an innovative industry leader providing cost effective solutions for large corrective services. JCS provides industry certified technicians and modern reliable equipment with a reputation for safety and service excellence that you can count on!
